Two Worlds?

http://irenepereyra.blogspot.com/2007/03/left-brain-vs-right-brain.html

Implementation focus Inspiration focus

Constrained by browsers Constrained by ideation

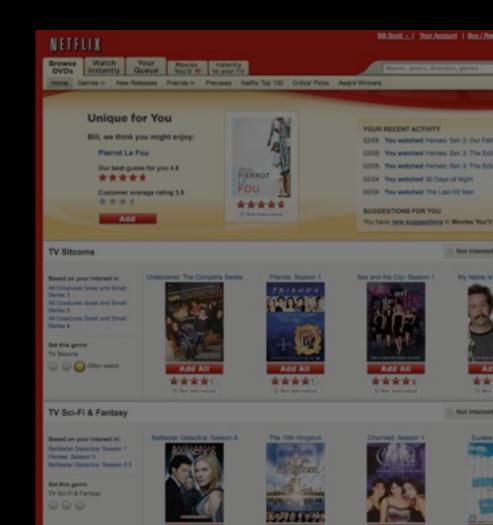

In reality, some developers have a very creative flair and some designers are very logical.

Nevertheless, the concerns of each role create a natural division between the two worlds.

guiding principles for designers

what engineers wish you understood...

1. the site is dynamic

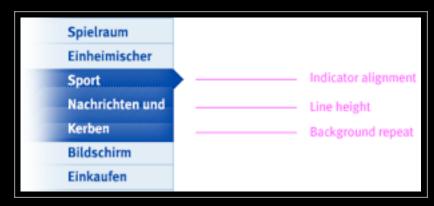

photoshop is static. the site is not.

"Content is a big part of your design. don't forget about it. integrate it. make it functional." (Nate Koechley)

"There's always less space in the design for text once you translate to German." (Nicholas Zakas)

Credit: Scaleable Design by Luke Wroblewski http://www.uxmatters.com/mt/archives/2007/10/scalable-design.php

Even something as simple as a title.

Rarely do long titles show up in comps produced in photoshop.

Axure

Gotchas for dynamic design

Not the same as printed page.

Photoshop = static

Use layers to simulate dynamic content

Learn how to **prototype**

Consider extremes and design for scalability.

Realize pixel-perfect layouts and font rendering will not look the same across all browsers/platforms

stop worrying about where the line break is in a particular paragraph of text.

Take the challenge: consider the dynamic nature of the site a worthy design challenge

2. technology is critical

web design without technology is just art. you must understand the magic that gets it on the site.

Building assets for engineering concerns also simplifies design work

Building assets for engineering concerns also simplifies design work

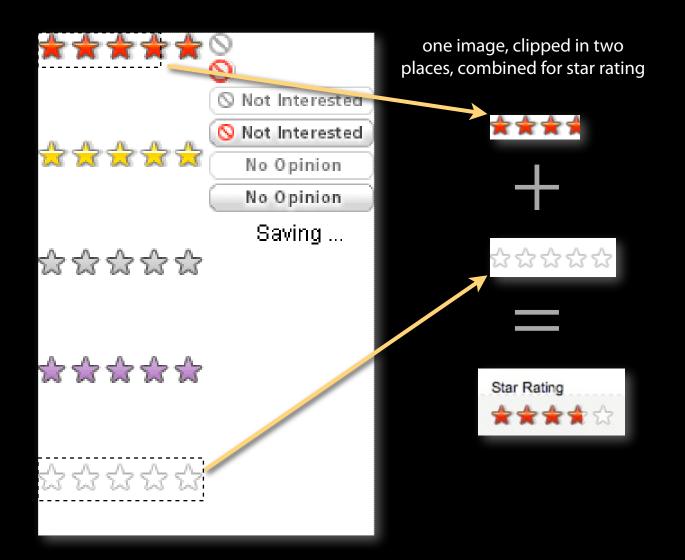

one image, clipped in two places, combined for star rating

Building assets for engineering concerns also simplifies design work

Building assets for engineering concerns also simplifies design work

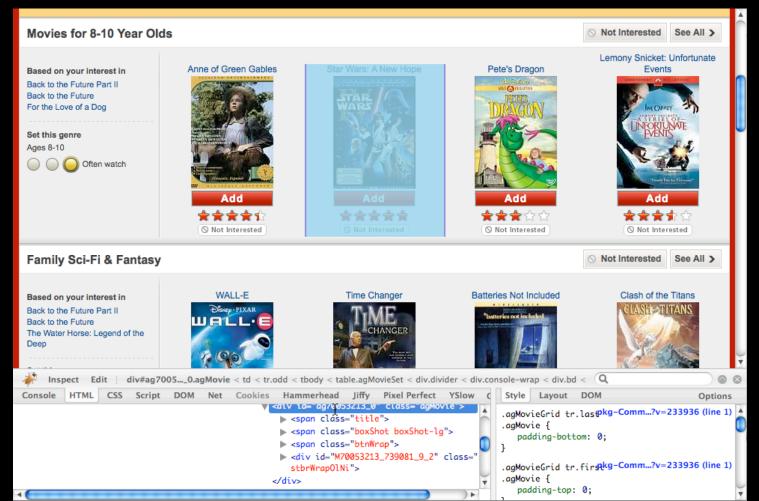

Know how stuff gets used

Often design teams don't know how their stuff ends up on the site Your HTML/CSS gets cut up into JSP/ASP/PHP?

Your photoshop comps get sliced/diced & html-ized?

One simple analysis tool is Firebug:

Know what is challenging

Vertical alignment

vertical-align does not work on block elements; however display:inline-block is best

Rounded corners + drop shadow

63 ways for rounded corners; 15 ways for drop shadow. Combined very tricky.

Pixel parity across all browsers

Stop worrying about pixel parity for IE6. Design for modern browsers and have graceful fallback for older browsers. See *Transcending CSS*, Molly H.

Equalizing height across columns

Faux approach works the best (background images fake out column height). But not known by all developers.

Pixel perfect widths

Due to IE6 bugs sometimes need a few extra pixels to avoid layout issues with floats (double margin bug); usually fixed with display:inline

Know what is challenging

Specifying minimum or maximum width

Not understood by IE6

Taming IE6

At least 12 bugs concerning floats & layout. These can be sinkholes in time. Transcending CSS.

Hard to layout against the flow

In the current world, remember that this is a document model not a GUI layout engine

Height is harder to control

Content should normally drive the height

Not possible to render your Photoshop fonts

Use browser-available fonts; SIFR and other solutions are buggy; specify alternates.

For the skill level of your engineers

Most problems can be solved. Seasoned engineers will have a bag of tricks.

Know what your technology can and can't do

At least at the high level. Think of it as your toolkit.

Not all designs cost the same

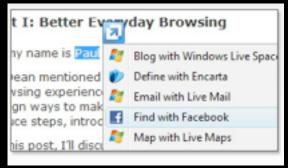

Everything has a cost. The cost may be in performance, development time, and/or maintenance time. We need to balance what you want against those costs each and every time. (zakas)

Know what your engineers can and can't do

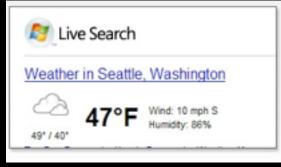

Not all developers are created equally.

Extensions

Rich, expressive UI with large set of controls

Simple development environment

Nice for prototyping

Adobe Air

Applications run without a web browser (though built with web technologies)

Merges DHTML & Flash world

There are still times to say "No"

Designer fonts (Gotham!)
But this might change with typekit/font-face!

Text in graphics

Specific heights

Hire developers that normally say "yes" and "get it"

3. components & grids are key

developers think in terms of reuse; designers often in terms of new work. you must also design for reuse.

Design for reuse

The temptation for most designers is variety for variety sake

Often designers get bored with their design before it gets fully realized on the site

They bristle at the thought of "reusable design"

Embrace Components

Design for each component & reuse throughout the site

Inventory site & create a vocabulary for the common components

Do a holistic design for the components as a suite

Easy to map to engineering

Components become tags, widgets, plugins, etc.

Results in cleaner CSS.

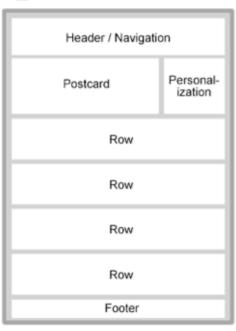

Instead of CSS appearing hodge-podge across the site, it gets reused for components See *Object-Oriented CSS* presentation on Slideshare by Nicole Sullivan

Embrace Grids

It's the right way to design anyway

See The Principles of Beautiful Web Design by Jason Beaird

Grids map to templates

There are at least 12 CSS frameworks each supporting the concept of templates/grids http://speckyboy.com/2008/03/28/top-12-css-frameworks-and-how-to-understand-them/

Establish templates and standards that are engineering approved

Include engineering early & often to get these reusable assets "blessed". They can make it happen. (@ Netflix - Simplified Visual Framework)

Reference grids & components in your designs

Can be quickly referenced in order to facilitate faster design cycles.

Easy to match photoshop, illustrator templates with a CSS grid system

Blueprint

Blueprint CSS version 0.7.1 (http://code.google.com/p/blueprintcss/) Copyright © 2007-2008 Olav Bjorkey (http://bjorkey.com)

Chest sheet v.1.1 by Gareth J M Saunders, based on Help Sheet v.0.3 by Alejandro Vasquez

STYLESHEET LINK

Download the latest version from http://code.google.com/p/blueprintcss/ and add these lines into the cheads of your page. Check that your href path is correct.

```
k rel="stylesheet" href="blueprint/screen.css" type="text/css"
  media-"acreen, projection">
k rel="stylesheet" href="blueprint/print.css" type="text/css"
  media="print">
of--- last IMIly
dink rel="stylesheet" href="blueprint/ie.css" type="text/css"
  media="screen, projection">
<! [endif] -->
```

USAGE

```
Chody?
  «div class="container">
     odiv class="span-15">
        specolumn 1s/po-
      4/6lvh
     ddiv classw'span-6 last'>
        c/divo
   47dtwh
c/body>
```

div.span-x now implies a column. Remember to use "last" for the last column of the row to avoid it jumping to the next row. Columns can be nested inside one another.

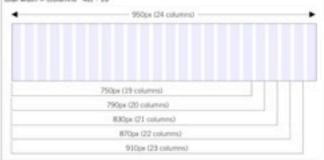

TYPOGRAPHY

typographic.css sets up some sensible default typography. The font-size percentage is of 16px. (0.75 * 16px = 12 px). Line-heights and vertical margins are automatically calculated from this in-

The base line-height is 18px (1.5ems). This means that every element, from line-heights to images have a height that is a multiple of 18 (or 1.5 if you use emu).

Color is #222 tdark greyt; font-family is "Helvetica Neue", "Helvetica", "Arial", sans-serif; Also defines tables, lists and misc. classes.

If you need more or fewer columns use this formula to find the new total width: total width = (columns *40) - 10

.push-x

| ONID CLASSES | |
|--------------|--|
| .container | A container should group all your columns; use on -clico |
| showgrid | Use this on any div.span / container to see the grid. |
| .border | Shows a border on the right hand side of a column; use on -click. |
| .colborder | Shows a border with more whitespace, spans one column; use on -otivo-, |
| .box | Creates a padded box inside a column. (padding: 1.5em; margin-bottom: 1.5em;) |
| hr.space | Use this to create a horizontal ruler across a column; can also simply use <hr/> |
| .clear | Regular clearing, apply to column that should drop below previous ones. |
| .clearfix | Clearing floats without extra markup. |
| div.last | The last column in a row needs this class; use on -odiv |
| div.span-x | Use these classes to set the width of a column; $x = 1.24$; use on -odiyo |
| .append-x | Add these to a column to append empty columns; x = 1-23. |
| prepend-x | Add these to a column to prepend empty columns; x = 1-23. |

Use these classes on an element to push it into the next column; x = 0.5.

reset.css grid.css typography.css forms.css let ices

RESET

Blueprint CSS resets all browsers' default tags to margin, padding, border: 0 font-size: 100% font-weight: normal

other ford values: inherit. image borders: 0

Tables still need 'cellspacings'0" in the markup though.

Blueprint Grid CSS Generator

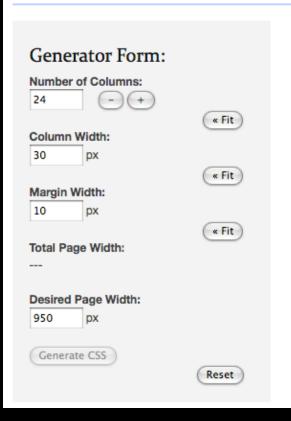

INTRODUCTION:

This tool will help you generate more flexible versions of <u>Blueprint's</u> grid.css and compressed.css and grid.png files. Whether you prefer 8, 10,16 or 24 columns in your design, this generator now enables you that flexibility with <u>Blueprint</u>.

Updated to version 0.7.1! Please Note! The default Blueprint CSS files are already generated for you to copy below.

USAGE:

- Enter your desired number of columns.
- 2. Your column width.
- 3. Enter the width of your margin.
- Enter the desired page width.
- Click 'Generate CSS' button and copy the results from the Generated Code section.

Generated Code:

Click in the text area below to copy all the CSS code and save your versions of **grid.css**, **compressed.css** and **grid.png**. Click tabs below to switch between files.

This is Plumb, a tool for composing web layouts for use with the Blueprint CSS framework.

4. partnership is imperative

it's tempting to design and toss over the wall. but the real magic happens during collaboration.

Quotes

"Our designers start to design things with development in mind, and our developers build code with design in mind. It's really beautiful."

"I've dealt with a couple of programmers in my career that were just 'no' guys - all day every day, no , no , - and it's a terrible experience. There is ALWAYS a way to make something work."

"From a designer's perspective: both sides should learn as much as they can about the other sides' disciplines. It can do nothing but good, fostering a greater understanding for what goes into the tasks each other have."

barthership.

2 keys

Communicate & Iterate

Communicate

Vocabulary Mismatch

Example: Lockups

Mismatch: components, templates

Mappings: grids -> templates, site elements -> tags

Common Project: Simplified Visual Framework (SVF)

Pattern Library

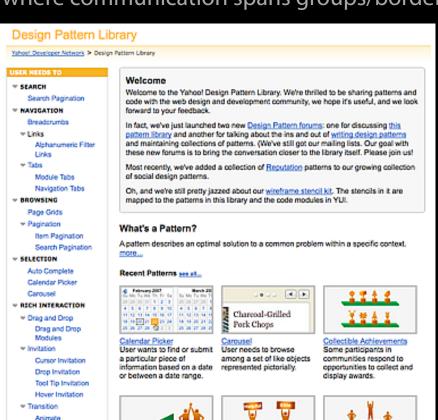

Brighten Collapse

Cross Fade

Nice way to capture the templates, components, interactions that are common

Gets people speaking the same language

More useful in established organizations & where communication spans groups/borders

Identifying Labels

Community members need

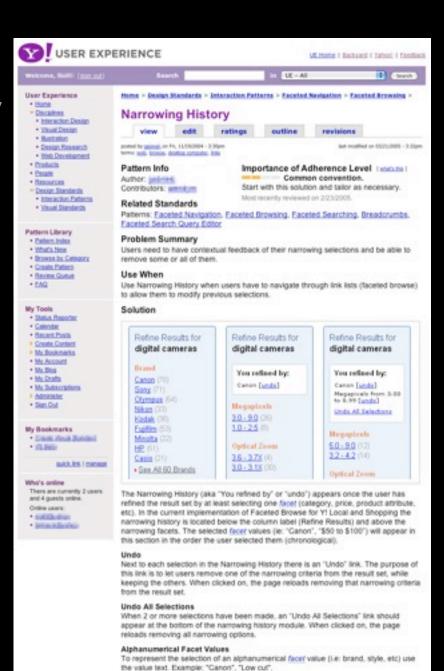

to identify distinguished

In highly competitive

communities, users may

The designer needs to

match the reputation system.

To represent the selection of a numerical facet value (i.e: megapixels, optical zoom,

etc) the text should include the facet name: Facet Name + Selected Value. Example

"Megapixels from 3 to 4", Optical Zoom from 4x to 6x". Price is an exception, as it is

Communicate

Learn how to talk to engineers

engineers adverse to unnecessary change; designers must educate "why" designers feel engineers push back to the point of a "broken design" which leads to rework... just what they didn't want

Roundtables

Has worked well @ Netflix. Every Friday at 2pm.

Throw out ideas.

Discuss technical solutions to thorny problems.

Discuss vocabulary. Hear frustrations.

Podrinership

Communicate

Practice transparency

many designers won't share till it is "perfect" engineers get surprised

Parthership

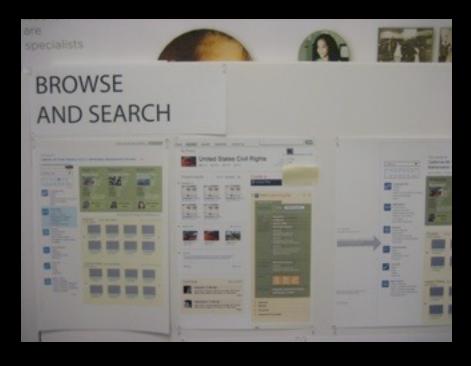

Communicate

Practice transparency

many designers won't share till it is "perfect" engineers get surprised

Get your design into the "wild"

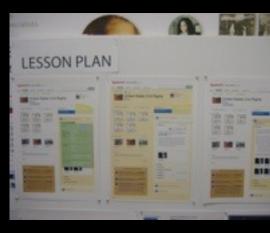

Make it visible everywhere

Communicate

Practice transparency

many designers won't share till it is "perfect" engineers get surprised

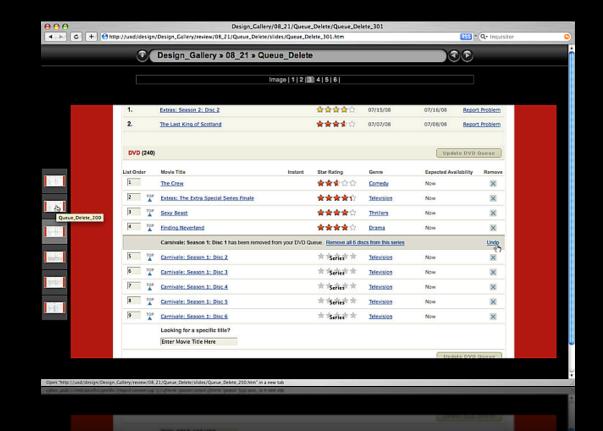

Get your design into the "wild"

Make it visible everywhere

Make it URL-accessible

Stop sharing files by email or embedding on the wiki. Use URLs. Front your file system with an http server.

Use a Design Gallery to make everything reviewed accessible before & after the meeting.

Iterate: Prototype

Prototype. You know to do this but rarely is the time taken.

This is where a good interface engineer, sufficiently motivated, passionate about interface can step up and be integral to the solution.

When engineering engages in a design like this... the results are beautiful. Everyone is happier (especially the users).

Build multiple prototypes

For interactive rich experiences it takes lots of variations (permutations).

View prototyping as a means to an end... not the final product.

Iterate: Prototype

Keynote & Powerpoint can create quick interactive mockups

Keynote: Smart builds, build ins, build outs and actions can simulate a real interface

Use a prototyping tool

Balsamiq, Azure, iRise, Flash, Flex, Interactive PDFs, Fireworks + PDF, Visio, OmniGraffle

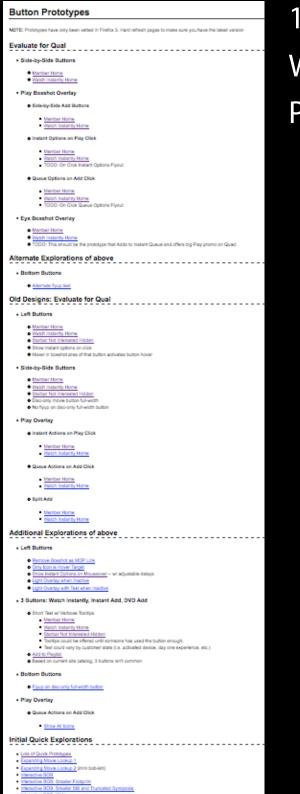

netflix. rate & replace

Prototyping is much more accessible now than in the past

Perhaps use jQuery for quick stuff?

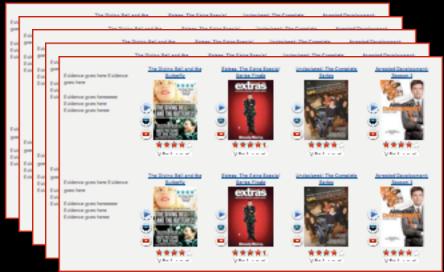

Coupled with firebug is a nice way to sprinkle in behavior to existing site

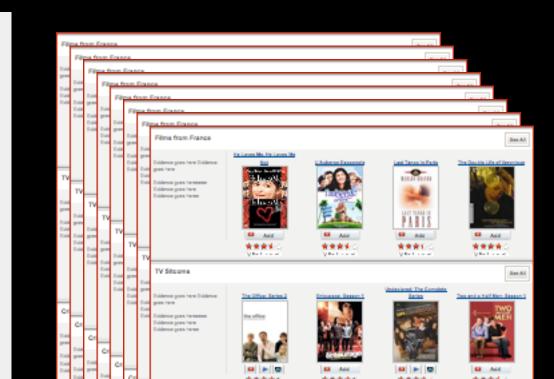

100+ variations prototyped over 1 week

Winnowed down between PMs, Design & Eng.

Put before users the next week & again 2 weeks later

- 1. the site is dynamic
- 2. technology is critical
- 3. components are key
- 4. partnership is imperative
