8 principles for enabling build/measure/learn

lean engineering in action

a different view of engineering

continuous customer feedback (GOOB)

customer metrics drive everything

think it. build it. ship it. tweak it

fail fast. learn fast.

lots of experimentation... build/measure/learn

paypal vs netflix

contrast this with a large enterprise like paypal (circa 2011)

guess what i found (in 2011)

roll your own. disconnected delivery
experience. **culture of long shelf life.**
inward focus. risk averse.

PayPal Sandbox

API Credentials

You must have credentials to test API in the PayPal Sandbox. In most cases, you will use the test accounts identified below.

The test accounts identified below are for testing only.

Note: These credentials will not work on the live PayPal.com to go live.

Test Account

Test Account: test_131206115

API Username: test_131206115

API Password: 131206115

Signature: AFc

To download the certificate, log into the account associated with the account.

REST APIs ^{BETA}

Great for simple payments using PayPal or credit cards. More REST APIs on the way.

[See our REST APIs](#)

lean startup movement

founded on **build/measure/learn** cycle

get out of the building (GOOB)

invalidate your risky assumptions

fail fast, learn fast

get to the pivot

go for the minimal viable product (MVP)

lean ux

designing products for build/measure/learn
requires 3 rules to be followed at all times

get to & maintain a **shared understanding**
form **deep collaboration** across disciplines
keep **continuous customer feedback** flowing

LEAN ENGINEERING

Enabling Build/
Measure/Learn
with Lean Startup
Principles

purpose of lean engineering

build

measure

learn

the etsy way. Kellan Elliott-McCrea, CTO etsy

build

embrace
continuous delivery

make mistakes fast

measure

use metrics driven
development

know that you made a
mistake

learn

blameless post
mortem

learn from your
mistakes

LEAN ENGINEERING

**8 principles for enabling
build/measure/learn**

1. focus on learning, not delivery

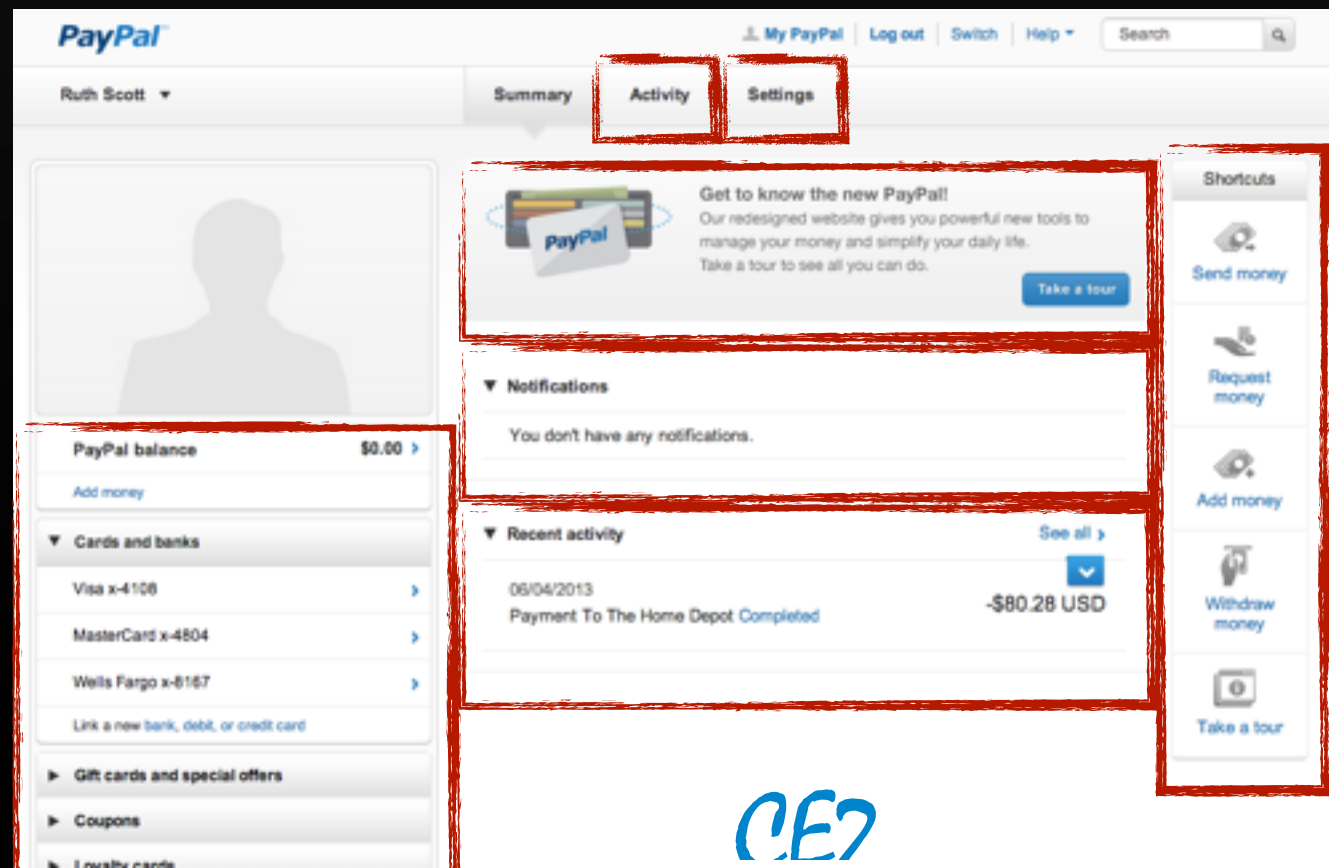

one of our biggest challenges is moving
from a **culture of delivery** to a
culture of learning

don't let delivery drive experience

too many teams can create silos within the experience

common silos that can affect experience:

- number of scrum teams
- specialization of skills
- device channels
- regional adaptations

2. build a culture of rapid experimentation

long shelf life for software

when software is not dynamically updatable
when it takes herculean effort to deliver

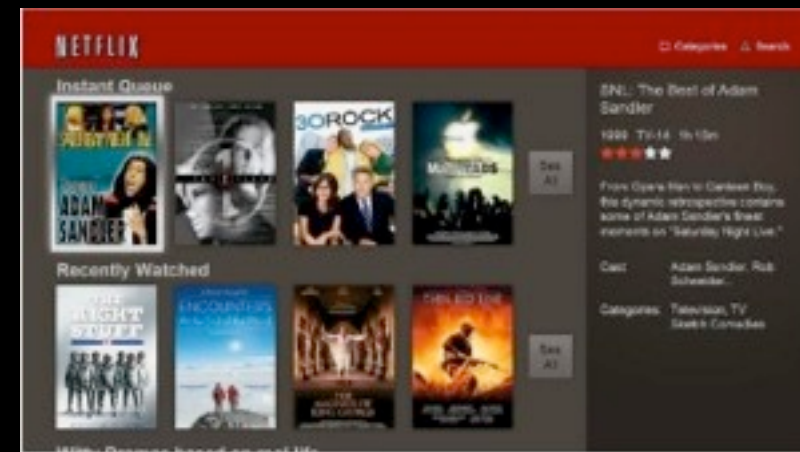

result

engineers run the asylum
delivery dates drive the experience
BDUF & waterfall prevail

typical netflix release

16 different test cells in the initial PS3 Launch (2010)

focus is on **build/measure/learn**

four distinct PS3 experiences launched on same day

ramping vs experimenting

ramping model results in one experience (with some tweaks along the way) after a long ramp up time

experimentation model results in many experiences being tested all along the way

avoid disconnected delivery experience

circa 1985

deliver to disk then to user

everything was focused on getting it
perfect for stamping on the disk

no user in the loop. experience
happened somewhere down the
supply chain

3. design for volatility

the epiphany

you have to engineer for volatility

change is the norm

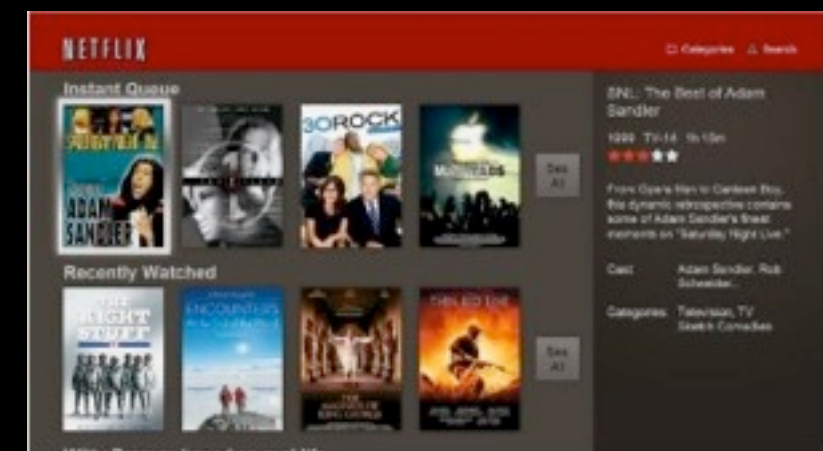

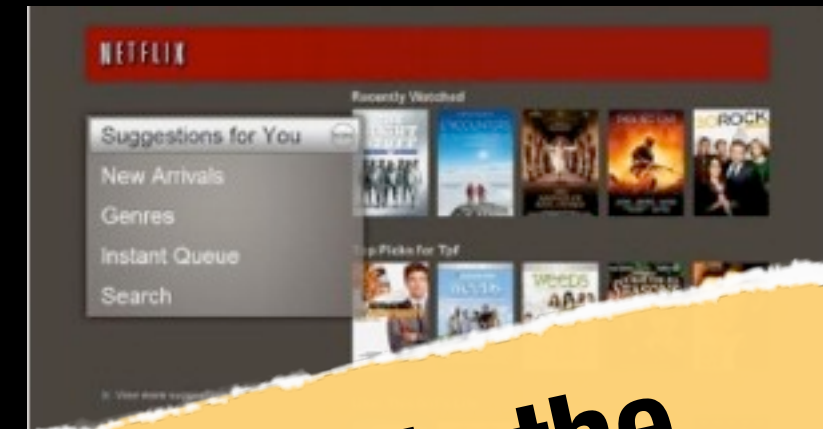

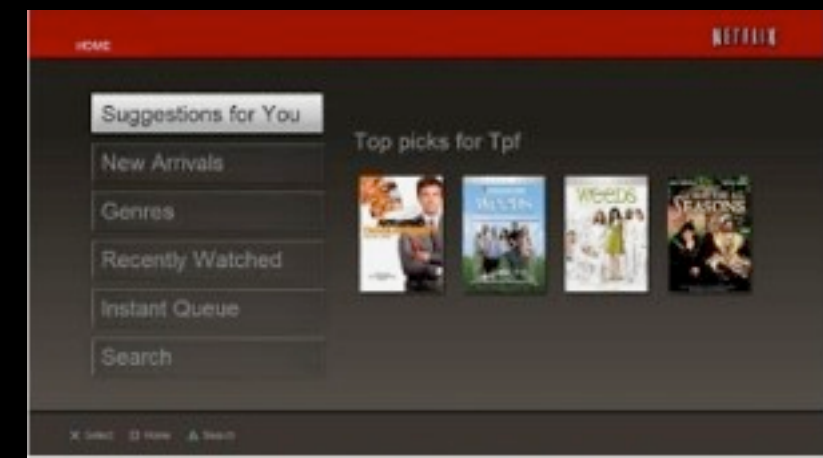

experimentation is not a one time event

launching a product is giving birth to the product. the product's life just begins.

design for throwaway-ability

*majority of the
experience code
written is thrown
away in a year*

**the ui layer is the
experimentation layer**

experiences must learn

All buildings are predictions.
All predictions are wrong.

There's no escape from this grim
syllogism, but it can be softened.

Stewart Brand

Our software is always tearing itself apart
(or should be)

Recognize that different layers change at
different velocities

github
SOCIAL CODING

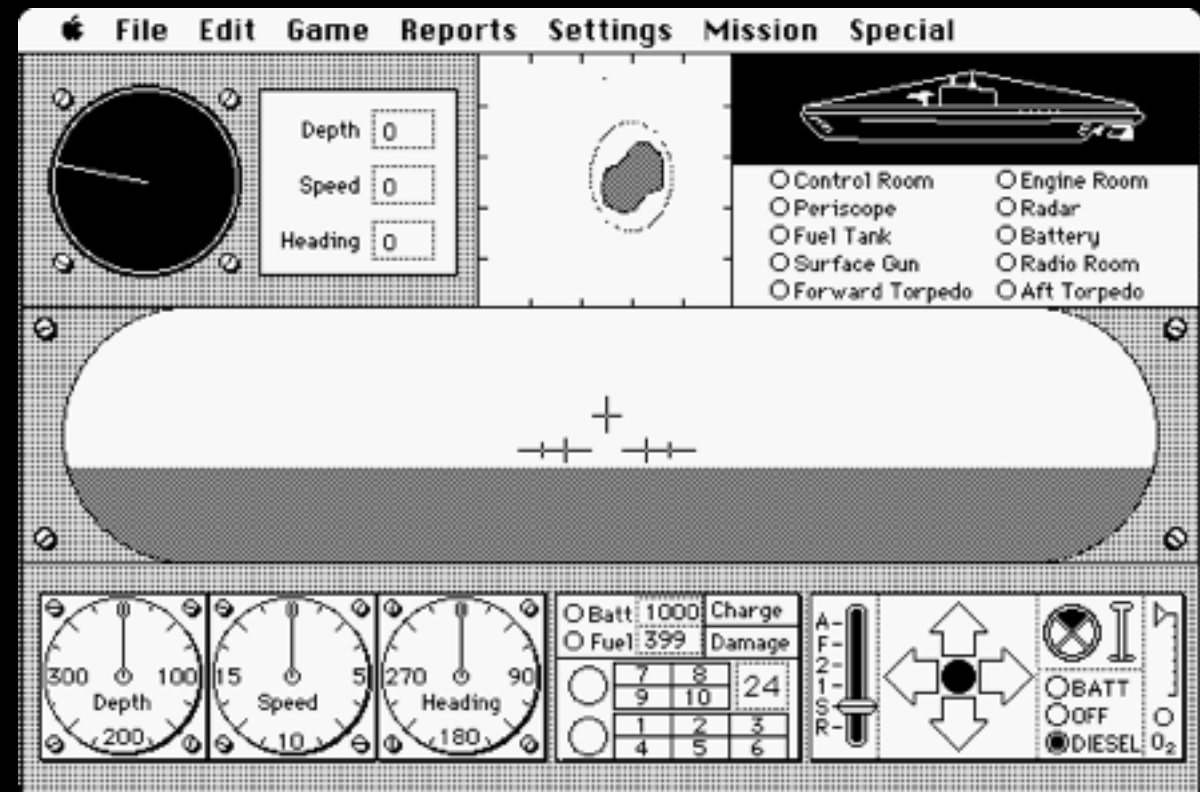

4. embrace open source

building experiences circa 1985

merry band of three. dropped out of
college for semester. it was nirvana.

however...

roll your own “everything”

(close your eyes & imagine)

no internet. no google. no blogs. no email. no
blogs. no stackoverflow. no github. no twitter.

much of the software era has been about
building from scratch.

of course open source was gaining momentum.
unix. gnu. linux. perl. mozilla.

use open source religiously

Bootstrap, from Twitter

BACKBONE.JS

UNDERSCORE.JS

express

BOWER

work in open source model

internal github revolutionizing
our internal development

rapidly replacing centralized
platform teams

innovation democratized

every developer encouraged
to experiment and generate repos
to share as well as to fork/pull request

give back to open source

we have projects that we will open source

- node webcore (similar to yeoman)

we are contributing back to open source

- contributions to bootstrap (for accessibility)

- contributions to bootstrap (for internationalization)

- core committer on dustjs project

using github for continuous *

use github for continuous integration

starting to use github repo model for continuous deployment

- marketing pages

- product pages

- content updates & triggers into i18n, l10n, adaptation

- components

© Scott Adams, Inc./Dist. by UFS, Inc.

5. map lean onto agile

btw, agile doesn't have a brain...

agile has been a big step in the right direction

but is an engineering discipline

doesn't address the full life cycle

agile has become big business and sometimes collapses under the weight of “ceremonies” (process)

but agile is a good “engine” for delivery if you know what to roughly build

agile needs a brain...

lean ux: enable a brain for agile

6. make your product a living spec

create a living spec

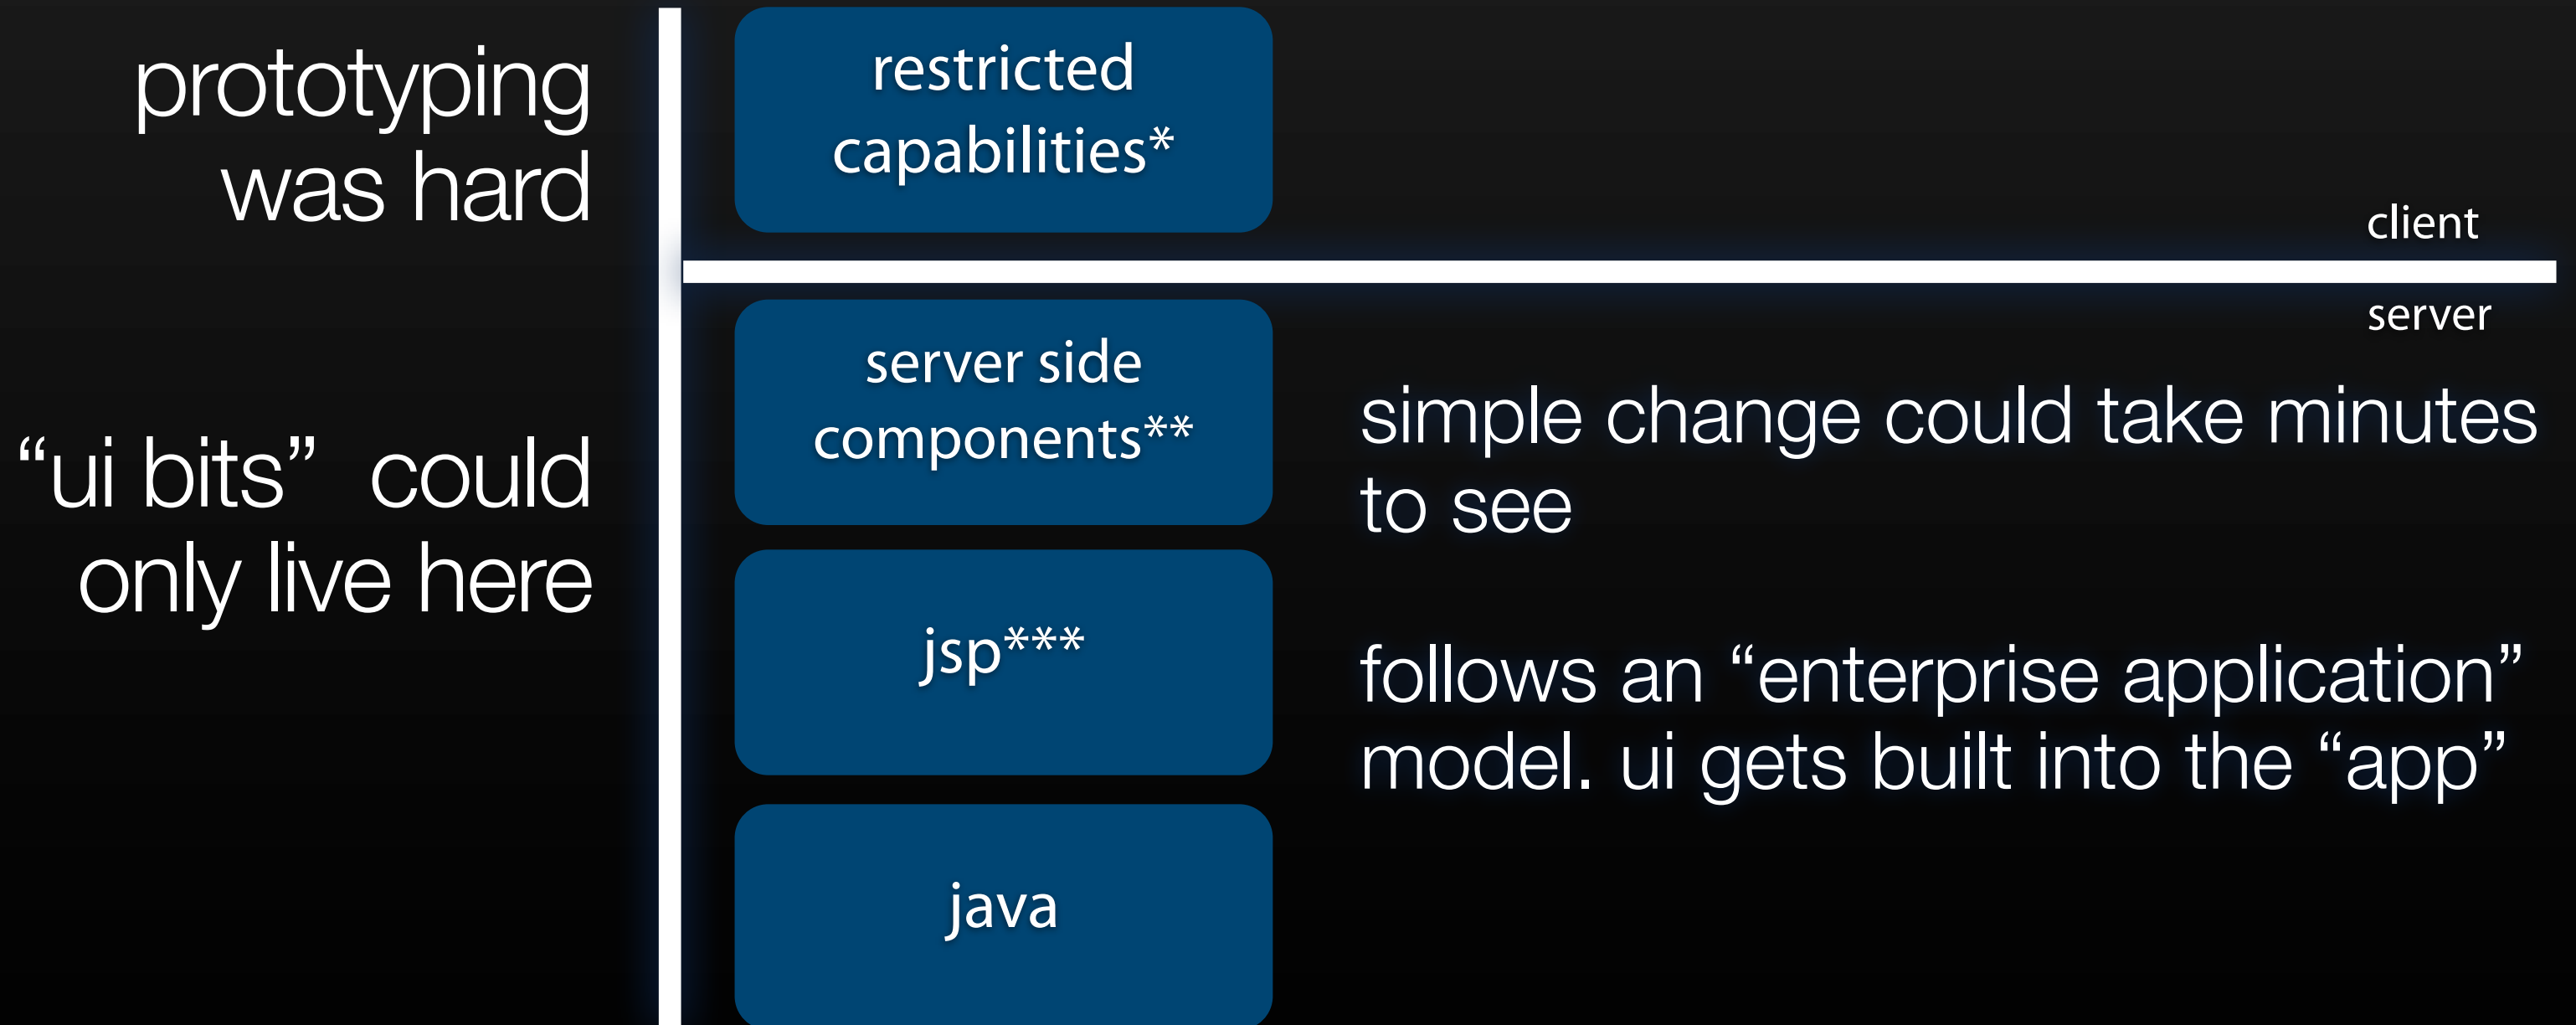

* DO NOT ERASE *				
MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Co-located in ASTUTE	(all day) Design Content Iterative Coding	(all day) Design Content Iterative Coding	9am Usability Session	12:30pm - 2:30pm Usability Review
		4pm Usability Delivery		3pm What to build next week
* DO NOT ERASE *				
Involved	UED UIG PO			

enabling the prototype

learning

stack circa 2011/early 2012

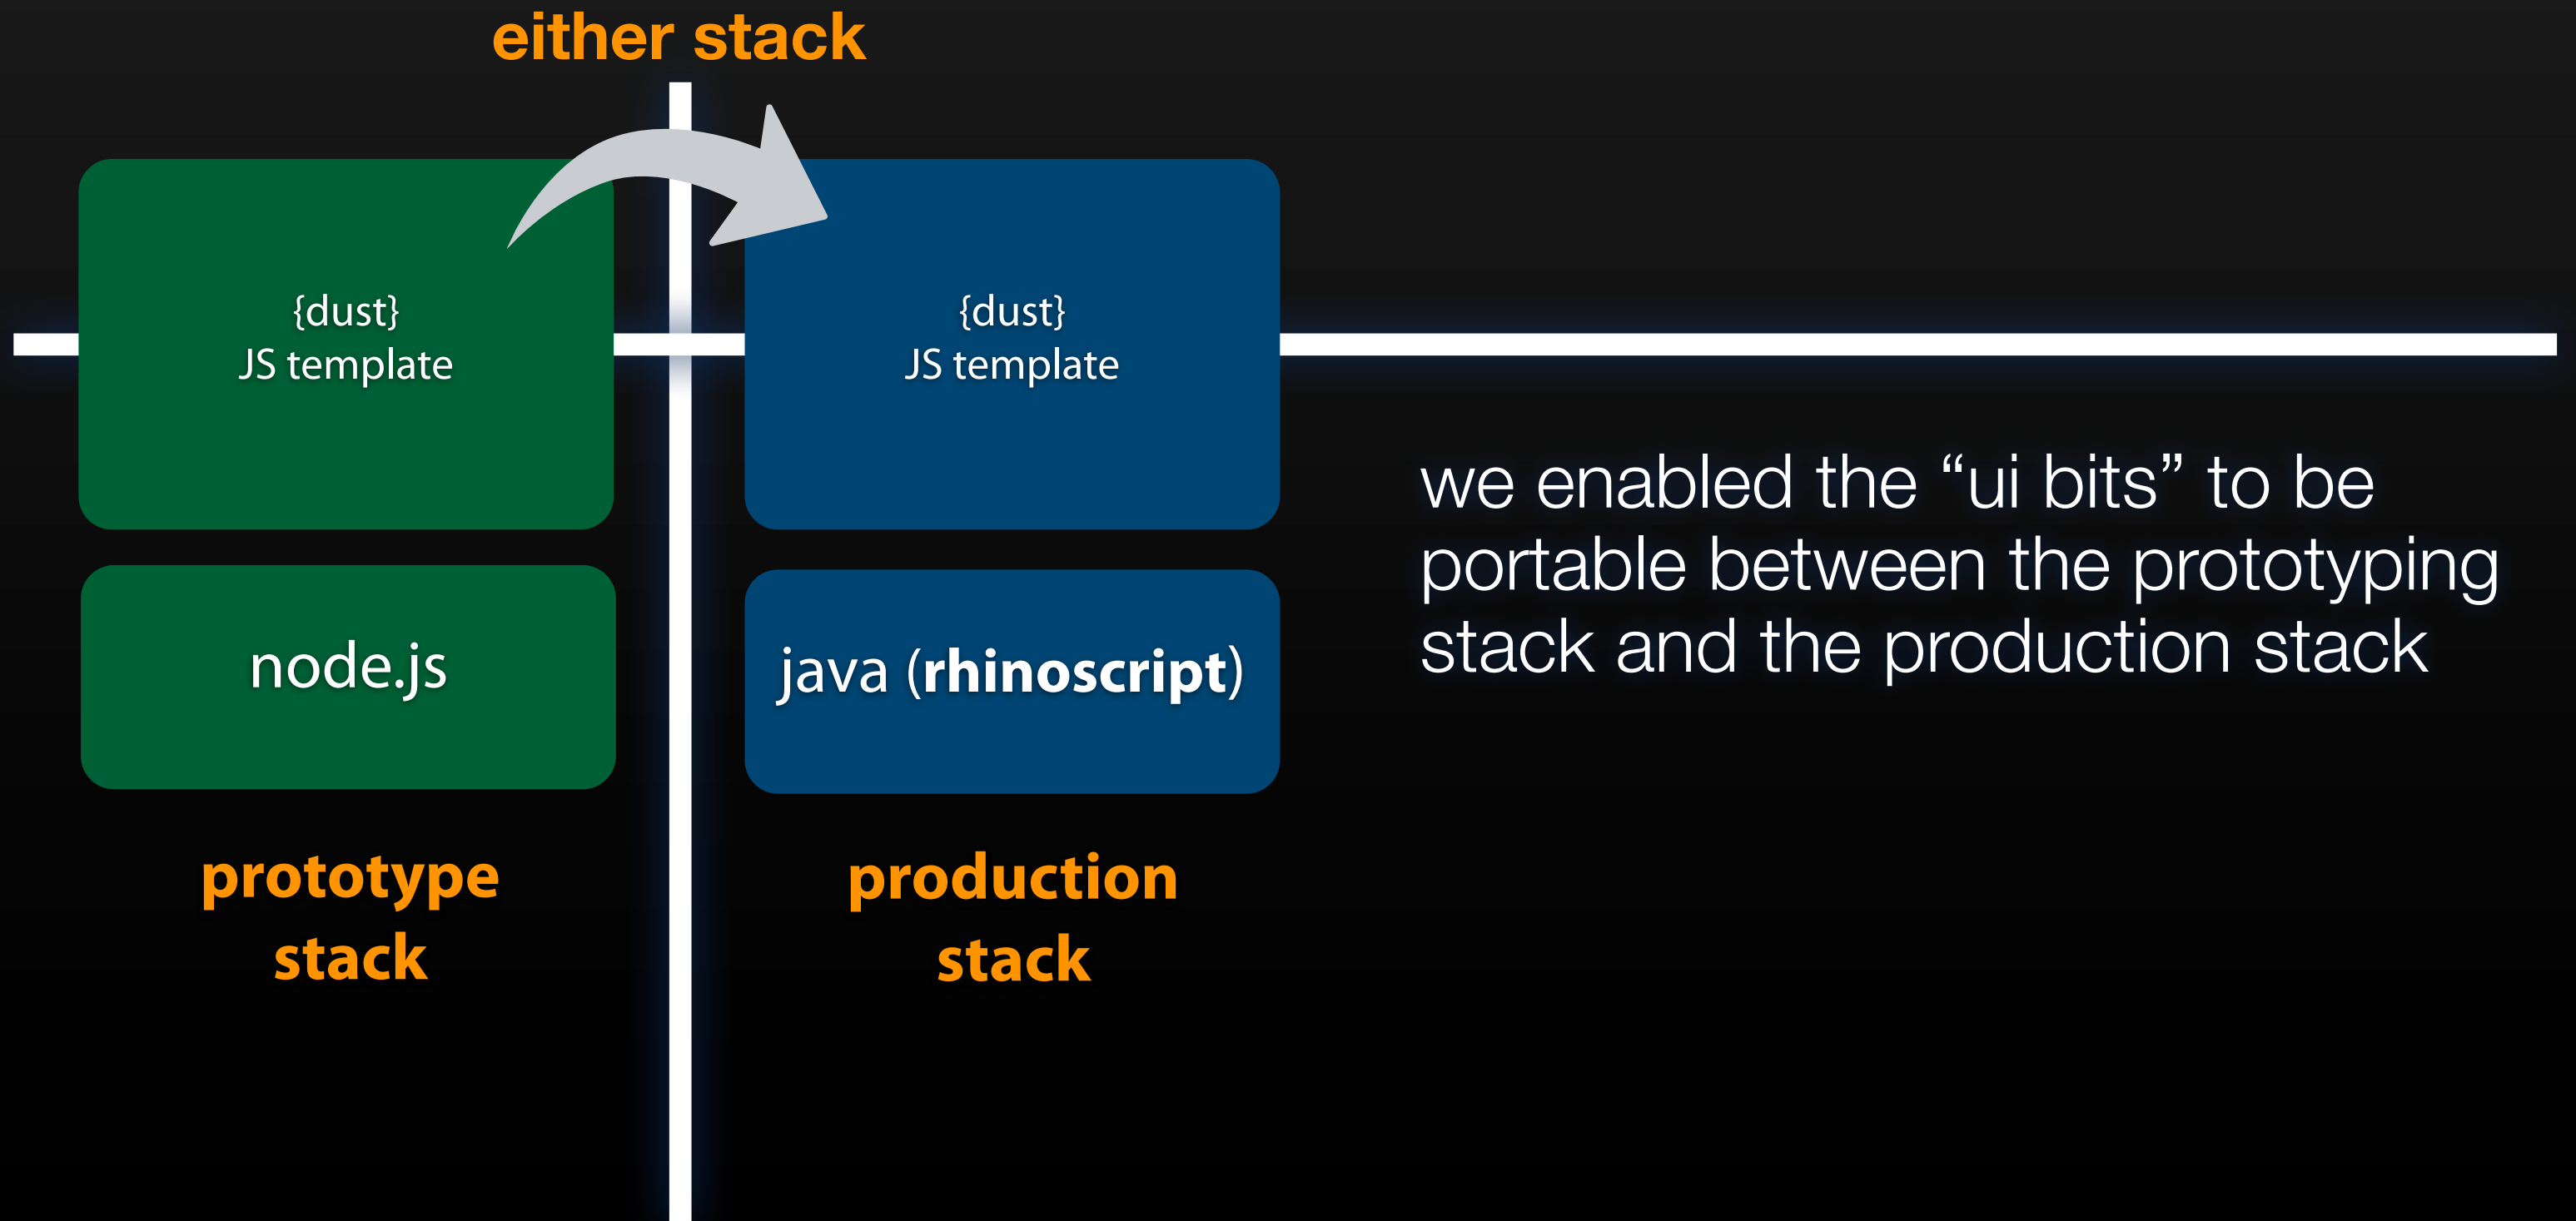

* assumed client developers were low-skill

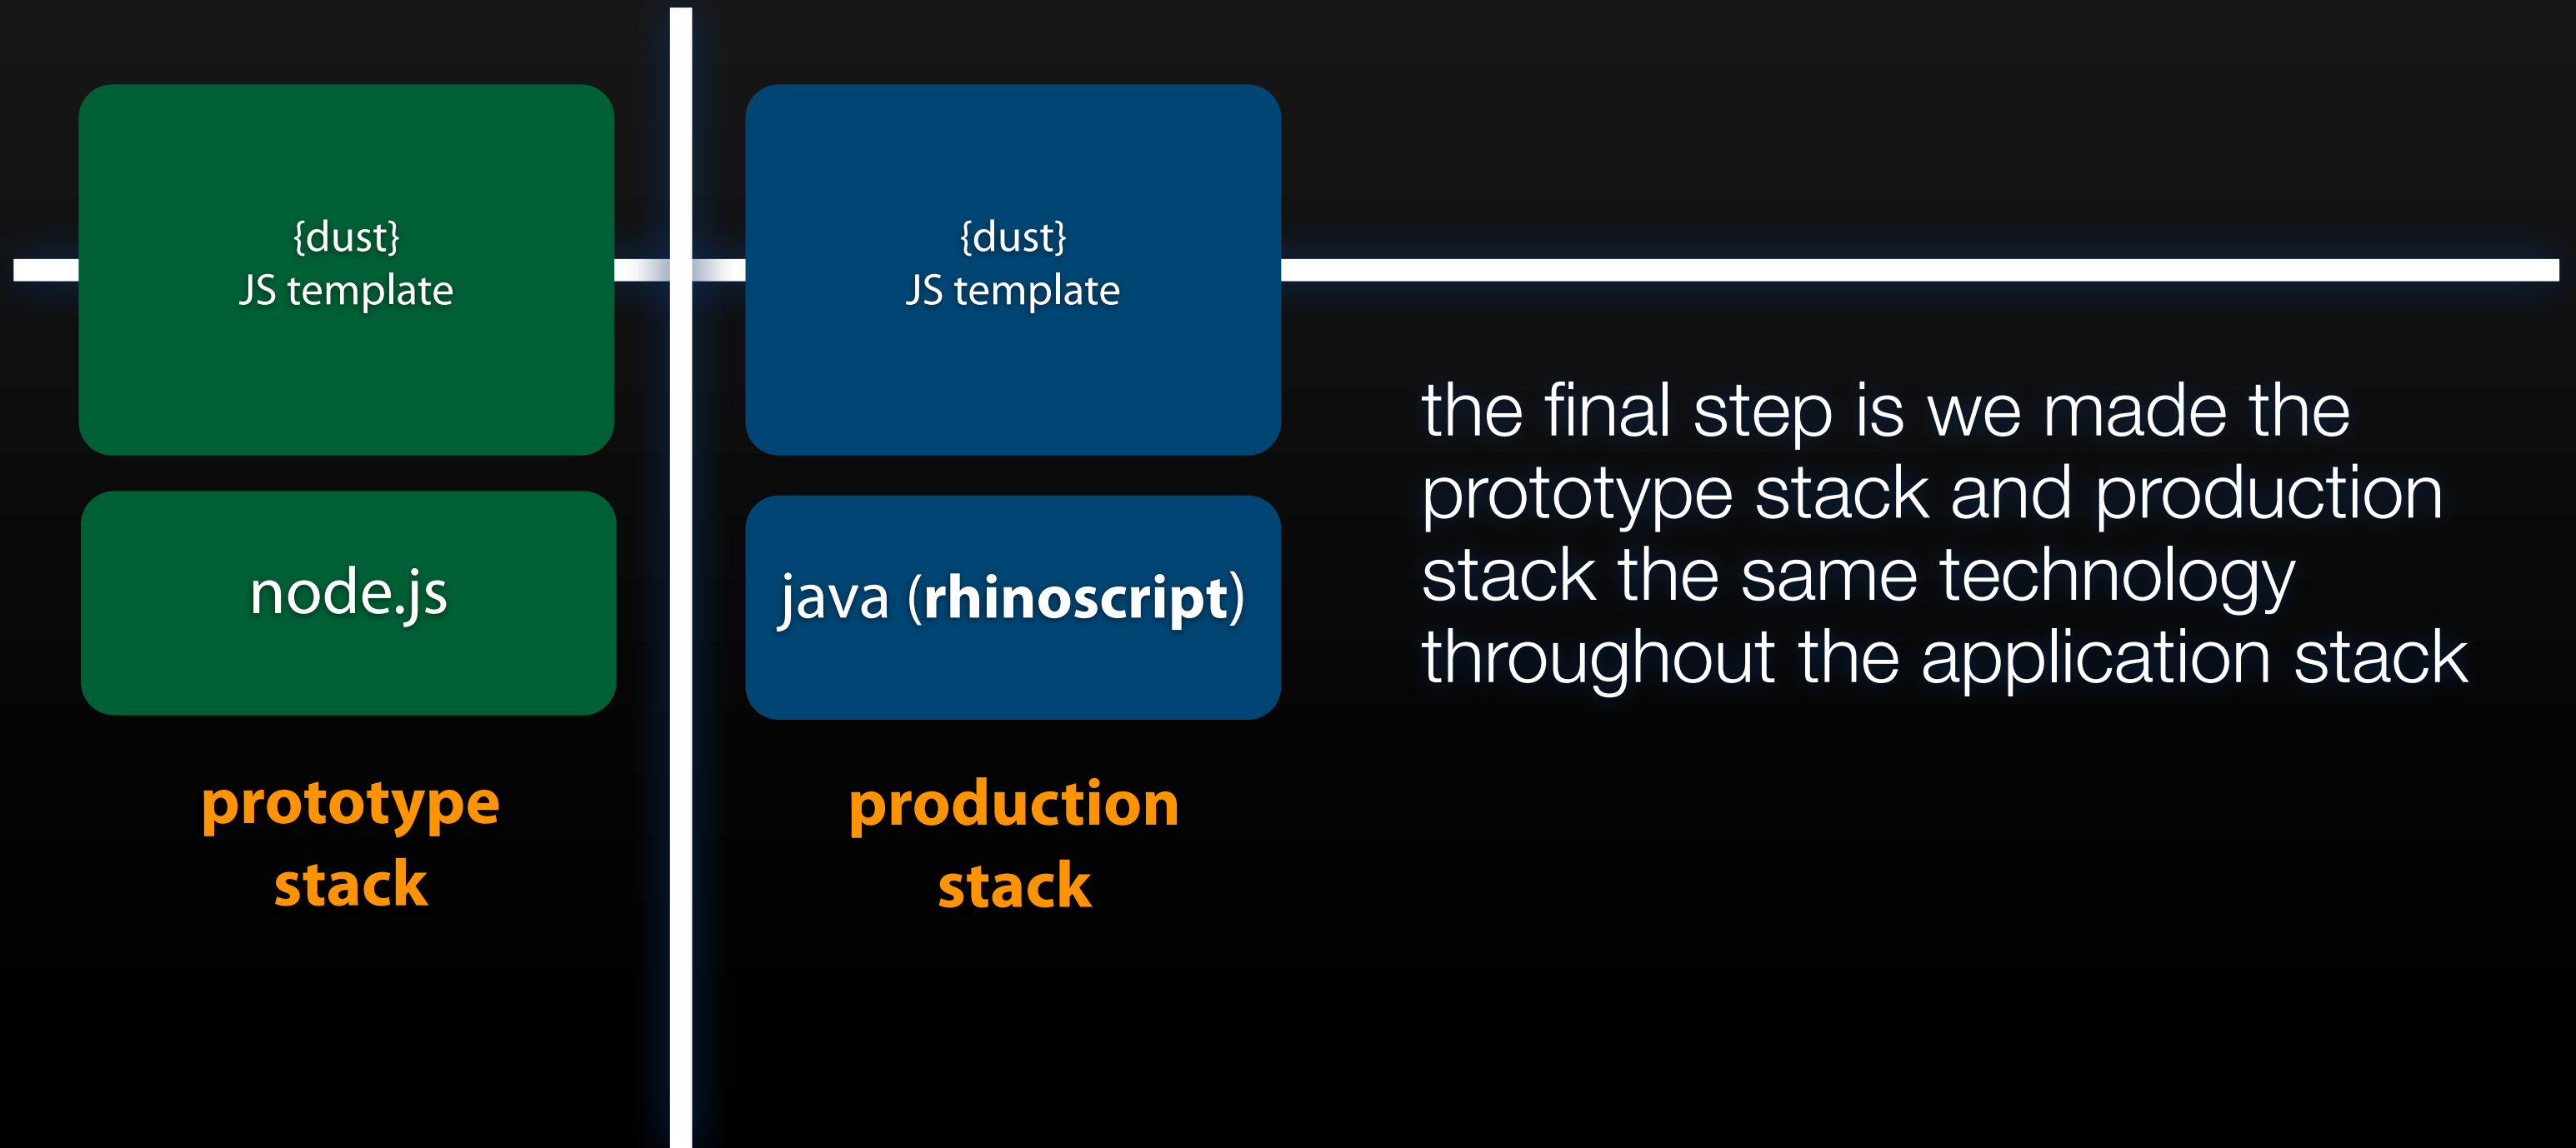

* required server side java eng for simple client changes

** java server pages. server-side java templating solution

we blended prototype & production

one stack: prototype & production

7. refactor your way out of debt

technical debt

rarely do you have a clean slate

generally you will have to refactor your
way to a nimble framework

we separated the ui bits

templates =
JS
{dust}

code = JS
(backbone)

style = CSS
(less)

images

re-engineered the user interface stack so that the only artifacts are:

- javascript
- css
- images

ditched the server-side mentality to creating UIs

- no more server-side only templates
- no more server-side components
- no more server-side managing the ui

we used javascript templating

templates =
JS
{dust}

code = JS
(backbone)

style = CSS
(less)

images

templates get converted
to javascript

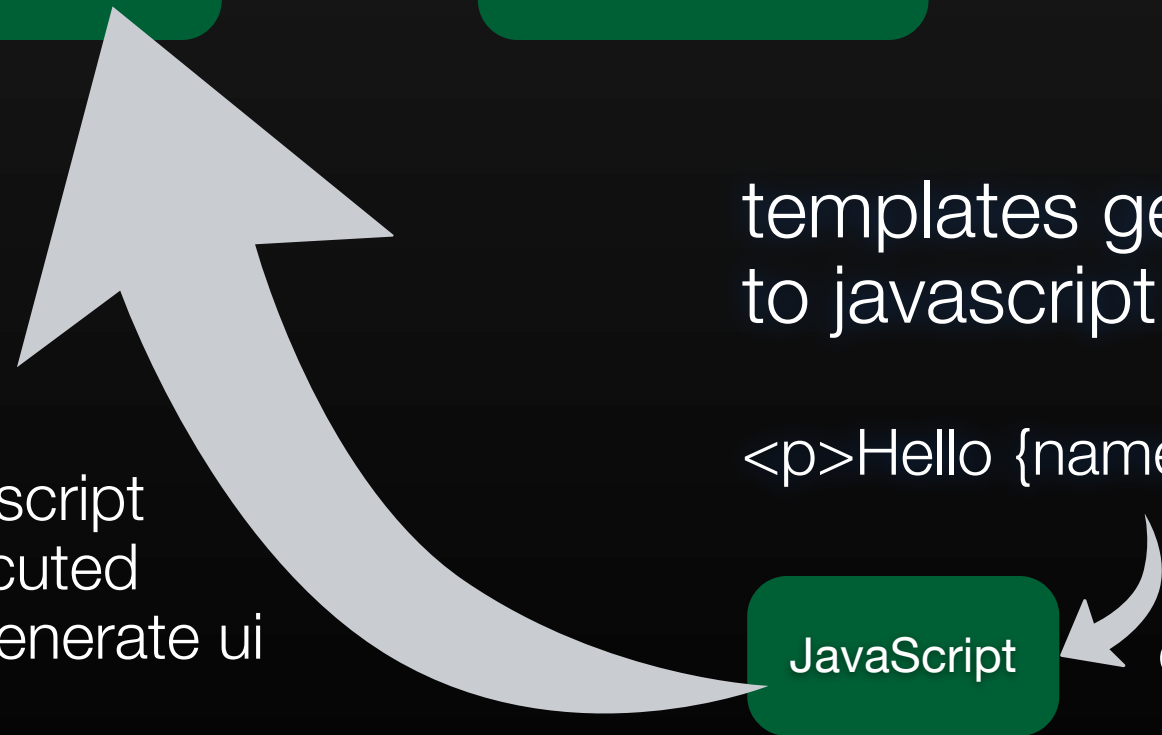

<p>Hello {name}</p>

{dust}

javascript
executed
to generate ui

JavaScript

compiles to...

we used natural web artifacts - “web bits”

templates =
JS
{dust}

code = JS
(backbone)

style = CSS
(less)

images

server-side language independent

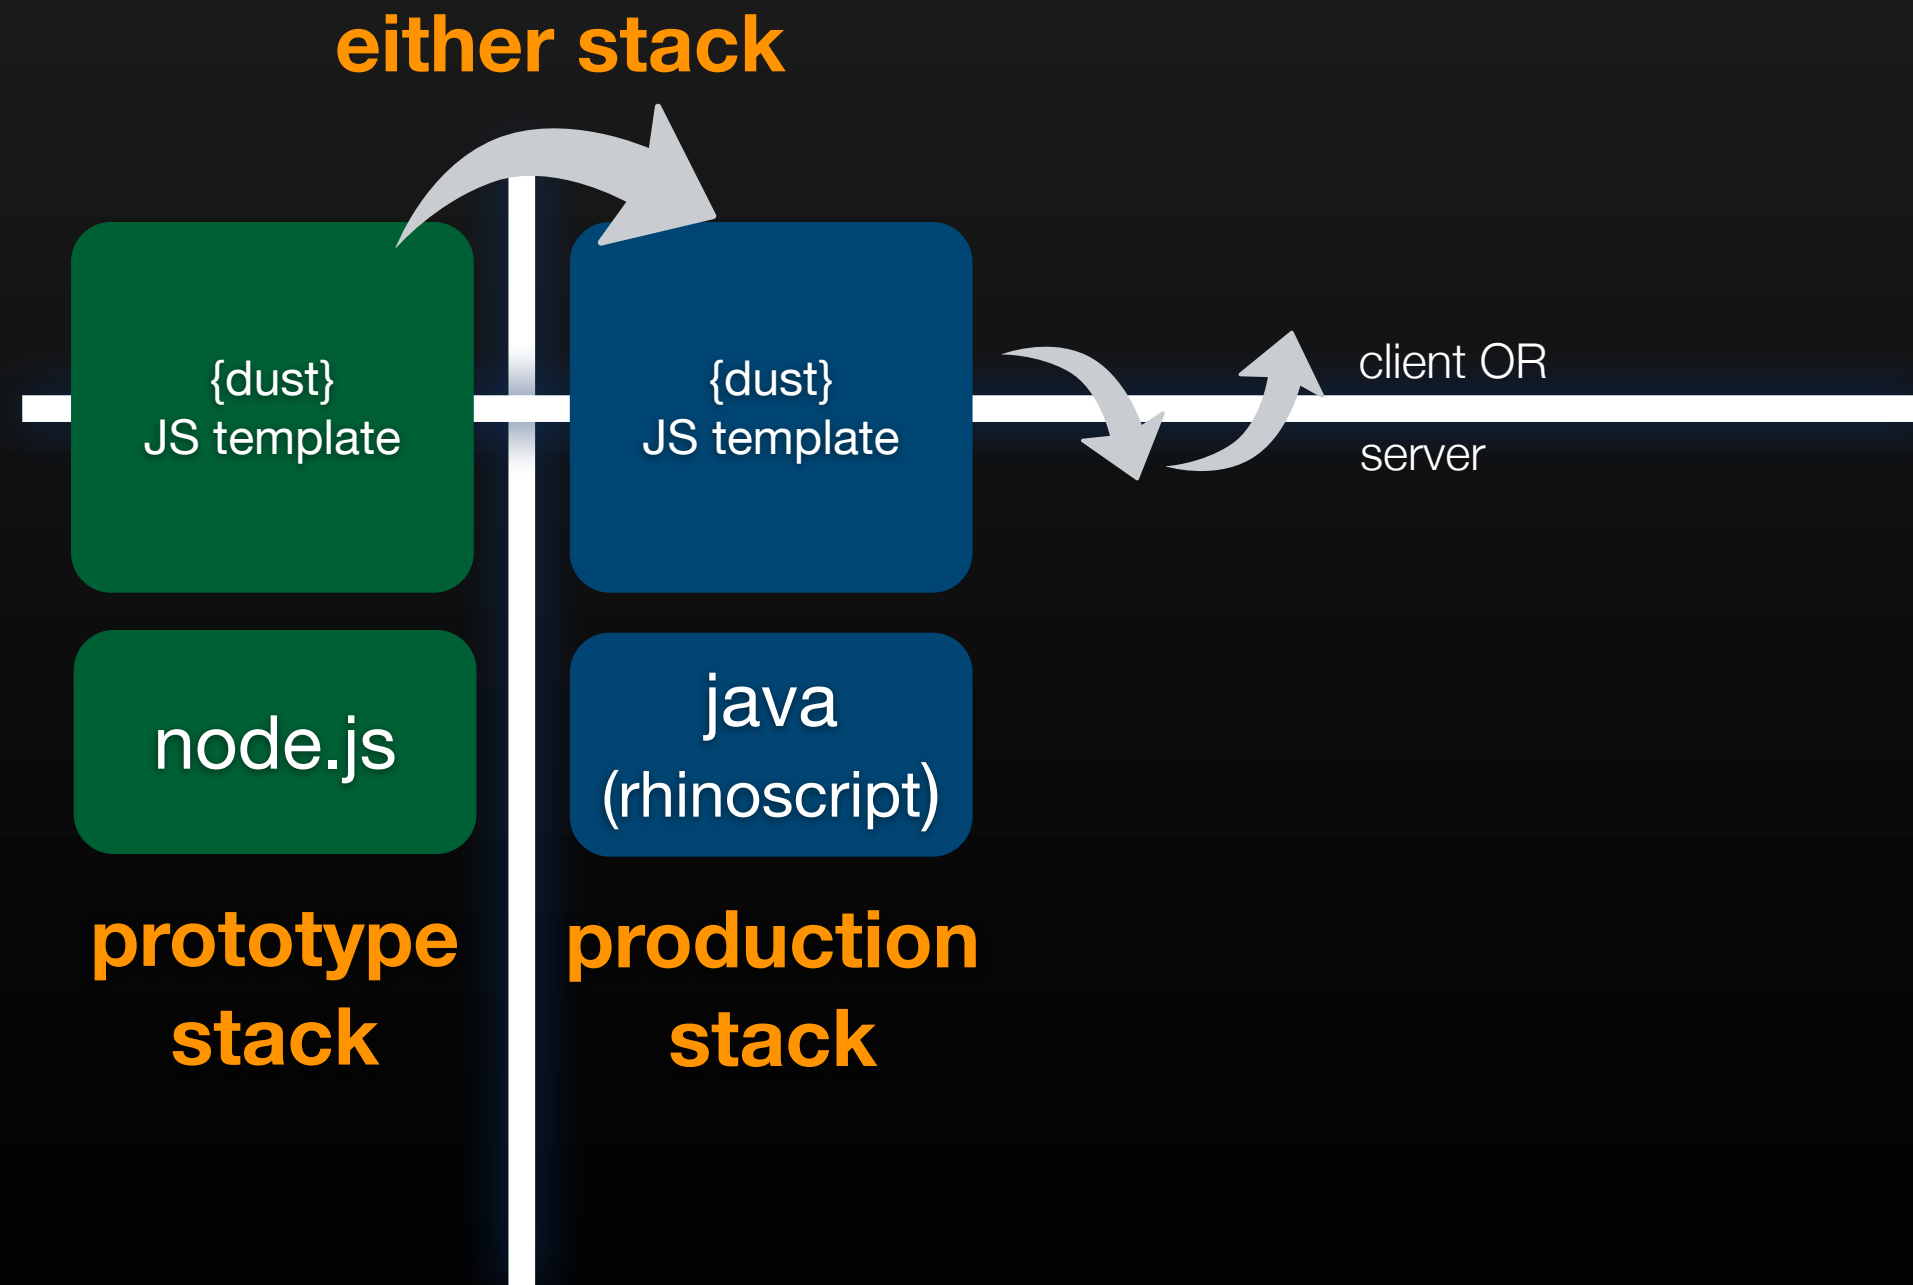

server/client agnostic

CDN ready

cacheable

rapid to create

ensured we could run on new & legacy

JS templating can be run in client browser or server on the production stack

we can drag & drop the ui bits from prototyping stack to the production stack

bad design kills

experience debt

don't just think about our technical debt
consider our "experience debt"
cripples our ability to capture market and
inhibits learning

8. learn across all channels

mobile strategy \neq just iOS app

native apps make it easier to create a **rich** experience

however, they are limited in **reach** and in **learning** capability

app install rates will only be a subset of the customer base

you need both a native and html5 strategy in order to maximize learning

html5 is critical to learning strategy

netflix gambled on html5 for mobile (iOS, android) and for game consoles, bluray players, hdtvs, etc.

why? build/measure/learn. network delivery.

new users will see your html5 experience

the onramp to onboarding is the lowly link

network delivery makes a/b testing straightforward

summary

rethink engineering. every dimension of your engineering needs to be about enabling build/measure/learn

technology. but not for tech sake. we are doing it for the experience to support lean startup principles.

process. enabled lean ux and put a brain on agile.

people. revitalizing our existing talent and started attracting new talent.
